

Global Warming Petition Project

<http://www.climatic-research.com/info.html>

*31,072 American scientists have signed this petition,
including 9,021 with PhDs*

<p style="text-align: center;">Petition</p> <p>We urge the United States government to reject the global warming agreement that was written in Kyoto, Japan in December, 1997, and any other similar proposals. The proposed limits on greenhouse gases would harm the environment, hinder the advance of science and technology, and damage the health and welfare of mankind.</p> <p>There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth.</p> <p> Please sign here</p> <p>My academic degree is B.S. <input type="checkbox"/> M.S. <input type="checkbox"/> Ph.D. <input checked="" type="checkbox"/> in the field of <u>PHYSICS</u></p> <p><input checked="" type="checkbox"/> Please send more petition cards for me to distribute.</p>
